

Please reject petition 04-160. XM is a pay radio service, and is competing on a level playing field right along with AM and FM radio. XM Radio provides unique and often times commercial free programming, in exchange for a monthly subscriber fee. It has also recently added continuous traffic and weather information for major metropolitan areas. I find this feature particularly useful during my daily commute. XM (and Sirius) should not be the subject of any limiting legislation drafted solely to restrict what it can offer.
